

# IRIS 2

■ **Efficient, robust and safe**

# Efficacy and responsibility IRIS

Operator's safety is part of the design, the air slot is quickly and easily adjusted towards the target.

The IRIS application system allows for individual air adjustment as each outlet permits steep angling or even closing of the air supply, if necessary.

The B50 boom is safely and comfortably operated from the driver's seat. The hydraulic system of the tractor does not matter, as the B50 boom enables adaptation to all tractor brands. The boom manoeuvrability enables a quick and easy turn at the end of the row.

The IRIS system provides the required droplet size and air conduction to the target.

The most delicate and difficult part of the vine, the grape cluster, is safely treated throughout the season, due to a very easy and quick calibration with the IRIS system.
